DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 09-25-03 has been considered.

Specification

2. The disclosure is objected to because of the following informalities: On page 5, line 12, "the word "and" should be --an--.
3. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: In claim 17, the steps of: "tracking when a memory array block is accessed..." (line 8) and "utilizing the stored record of array block..." (line 11) are not described in the specification.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
5. Claims 1-16 and 20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As for claim 1, "the memory bank" (line 4) lacks antecedent basis in the claim. Second, "refresh commands" (line 5) and "the refresh command" (line 8) are not

Art Unit: 2818

consistent and confusing. Does the Applicant intend one or plural refresh commands?

Clarify.

As for claims 10 and 20, the claims suffer similar deficiencies as in claim 1.

As for claims 2-9 and 11-16, the claims are rejected for their dependency on claims 1 and 10, respectively.

Allowable Subject Matter

6. Claims 17-19 would be allowable when proper antecedent basis for the claimed subject matter is provided.

7. Claims 1-16 and 20 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

8. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to teach a random access memory comprises a detection circuit coupled to a command block and to a memory array, the detection circuit configured to store a hit detect signal when the memory array is accessed, and receive the refresh command including enabling block select signals only when the hit detect signal is stored while the refresh command is received.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The U.S. patents cited in the PTO-892 disclose a refresh mode in a memory device with a power saving feature.
